

About our Images

1. All images are in RGB format. The end user will be responsible for conversion to CMYK.
2. All images are in jpg format with the least amount of compression. This allows more files to be emailed more easily without sacrificing quality.
3. The images are sized at 2200 pixels on their longest size and are saved at 72 ppi with a sRGB profile.

This resolution facilitates internet download and viewing. However, image quality has not been degraded in any way.

For example, one of our images (sized 1500 x 2200) can be:

21" x 30.5" at 72 ppi
10" x 14.6" inches at 150 ppi
5" x 7.3" at 300 ppi

4. To adjust an image's size: From within Photoshop choose Image> Image size.

Make sure "Resample Image:" is Unchecked and then type in the desired resolution into the "Resolution" field and click "Ok."

The image's length and width will adjust accordingly, without any degradation in image quality.

5. Images should be sharpened at final size.
